EDUCATION

B.Tech, Computer Science
Jain University
Expected Graduation: 2027
CGPA: 7.1 / 10

TECHNICAL SKILLS

Languages
Python, Java, Kotlin, TypeScript, SQL

AI / GenAI
LLMs, RAG, Embeddings, Semantic Search, Agentic Workflows

Backend / Web
FastAPI, Node.js, React, REST, WebSockets, JWT/OAuth

Databases
PostgreSQL, MySQL, MongoDB, SQLAlchemy, Room

Tools
Git, VS Code, IntelliJ IDEA, Excel

HIGHLIGHTS

- 3 self-directed, production-style projects
- Full ownership: design, build, debug, deploy
- Available to join immediately
- Seeking first internship / SWE role

CHETHAN T

SOFTWARE ENGINEER — BACKEND & AI/ML

PROFILE

Computer Science student focused on Backend Engineering and Applied AI/ML. Built production-style systems using Python, FastAPI, PostgreSQL, RAG, LLMs, WebSockets, and React, including a memory-enabled AI agent and a real-time messaging platform. Available to join immediately and experienced in API design, authentication, data synchronization, and end-to-end project ownership.

PROJECTS

NOVA — Intelligent Conversational AI Agent

Python • FastAPI • LLMs • RAG • Embeddings • PostgreSQL

- Built a context-aware GenAI agent with persistent cross-conversation memory and semantic retrieval, evaluated across a large test set.
- Engineered intent-based routing and async LLM streaming pipelines to reduce response latency across concurrent sessions.
- Designed memory-priority logic to surface relevant historical context and newer corrections, reducing repeated response errors.

Secure Real-Time Messaging Platform

Kotlin • Android • React • FastAPI • WebSockets • Passkeys

- Built Android and web clients on a shared backend with server-authoritative delivery and low-latency real-time messaging.
- Implemented offline messaging with Room caching, incremental sync, and resilient WebSocket reconnection to reduce redundant data transfer.
- Implemented JWT, OTP, and Passkey/WebAuthn authentication with trusted-device management.

Student Mental Health Management System

Node.js • MongoDB

- Built a CRUD platform for student check-ins with structured validation and reliable record handling.
- Implemented input validation to block malformed submissions and maintain consistent stored data.
